

The team is looking for a successful candidate with a specialization in Algae. The intern will assist in the (IMAWARE) project lead by R &D.

#### **Job Duties and Responsibilities:**

- Keep notes and organize sample data
- Clinical trial
- Call and email participants to follow the blood test and take their prescriptions
- Do statistical analysis for all the participants data
- Update the applications of participants
- Since the intern will assist with a range of different projects, a strong organization background is needed
- Excellent communication skills
- Willingness to perform routine tasks to support research staff

#### **Required Education, Experience, and Skills**

Must be enrolled as a full-time student in a degree granting program or graduated in the past 12 months from an accredited institution. Internship period cannot exceed 12 months past graduation.

#### **Preferred Qualifications**

- Ability to independently conduct laboratory experiments, as well as work as part of a larger research team
- Experience with laboratory work
- Statistics skills in excel and R program
- Fluent in English writing and oral
- Good communication and writing skills to communicate with participants
- Experiences in clinical trial is a plus

#### **Submission Guidelines**

Please note that in order to be considered an applicant for any position at QH you must submit an application form to Patricia Hunt, HR Manager at Qualitas Health (phunt@qualitas-health.com). Applications are not kept on file for future positions. Please include a cover letter and resume with each position application.
